# PC-POS
POS SOFTWARE

INSOFT ®

PC-POS 7 is a cash register program for POS (Point Of Sale) computer terminals.

PC-POS 7 combined with **PC-Market 7** makes an integrated system for retail business management.

PC-POS 7 provides an intuitive and easy-to-use user interface compatible with touch screens and specialized keyboards.

The clear and simple interface means cashiers will quickly learn to handle sales efficiently using PC-POS 7

A touch screen facilitates day-to-day operation. No need to search for keys: simply touch an icon on the display. The quick sale icons make it much faster to select the fastest moving goods

You can also use a normal monitor and assign required functions to appropriate keys on a classic or programmable keyboard

A barcode reader and card reader significantly speed up the handling of sales and processing of payment or discount cards

Tailor the software to your industry-specific needs: you can define an optimal configuration for the cashier window's appearance and functionality with a number of ready-to-use interfaces

Lock cash registers when not in use: the session lock functionality means you can be sure there will be no unauthorized access to a checkout station

Keep cashiers accounts effectively: in the PC-Market 7 inventory management system you can review each cashier transaction and check their sale volumes, numbers of customers served, the amount of cash that should be in the drawer, as well as the number of card payment confirmations, vouchers, reversed items, cancelled receipts, etc

Gain control over cashiers working: the system supports multiple cashiers working at one time; each of them can have several receipts open. Cashiers can move between cash registers – the system keeps track of which transactions were handled by which cashier. A cashier cannot select a colleague's receipt, as only his or her own receipts are visible on logging in

Give discounts and process loyalty cards: the software can add points to loyalty cards, and quickly provide information about customers, current total points and the discounts they are entitled to

PC-POS 7 is compatible with most models of store equipment:

Fiscal printers

Barcode scanners

Electronic weighing scales

Programmable keyboards

Magnetic card readers

Customer displays

PC-POS 7 is a simple, intuitive and functional cash register program designed for POS (Point Of Sale) computer stations with a display, fiscal printer, barcode scanner, weighing scales, and touchscreen or programmable keyboard

PC-POS 7 is compatible with touch screens

PC-POS 7 is configurable; it can cater for the needs of various retail businesses regardless of size. It can support store sales in sectors such as grocery, clothing, construction, home appliances, consumer electronics, furniture, electrical and metal equipment, etc. The software can also be used to handle restaurant and catering sales

PC-POS 7 is designed to support checkout systems, but it can also run on a standalone cash register

PC-POS 7 offers a wide range of search methods for goods going through the checkout:
- Using a barcode scanner (RS, keyboard or USB type)
- By manual entry of the code if the barcode is damaged
- By name on the list of goods
- By context on the list of goods
- By defining conditions on selected columns of the list of goods
- Using definable goods parameters
- Using definable quick sale icons on the touch screen
- Using programmed quick sale keys on the keyboard

PC-POS 7 used with PC-Market 7 provides, among other things:
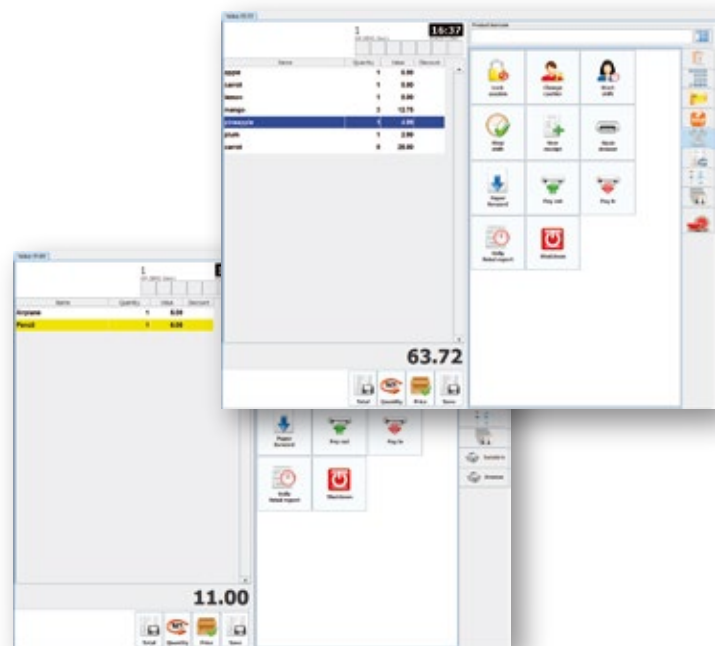

Detailed analyses based on sales data:
- Reports on the number of customers in each hour of operation
- Basket value analysis
- Detailed basket content analysis
- Sales records with a breakdown by VAT rate

Keeping of accounts for individual cashiers:
- Amount of cash handled in each currency
- Confirmations for payment card transactions, vouchers, cheques, etc.
- Number of reversed items and cancelled receipts

Cash register operation overview

Differentiation of product lines assigned to each cash register

Core functionalities of PC-POS 7 software:
